

From standardized courses to custom interactive solutions, we can help.

Our Story is simple. We began Netelligent Corporation in 2003 when a small group of really talented technology engineers made the decision to create an organization that they could feel fantastic about.

We have evolved and grown quite a bit since our birth while staying true to our initial vision. We are proud of our Company, what we do and what we stand for.

Get to know us.

Training

YOUiversity

As technology evolves, so should you. We have formed partnerships with two of the most prominent and trusted training organizations. The goal is to help you get the most out of your investment in your resources. So, whether you need to get ready to support a new technology, or need to keep your certifications up to date, we can help. More than offering a menu of classes, we will help you understand training requirements, available courses, and development strategies, with an eye to helping you squeeze the most from your budget.

A Consultative Approach

If you need help with understanding training requirements and resource development, and also need help scheduling, organizing and communicating it all, let us know. Additionally, we can help you understand and most effectively utilize vendor provided Learning Credits. So, if you have any questions about who to train, how to train or what to train, just ask us... we are here to help.

Local Classes

We have built a brand new training facility at our HQ. The rationale was simple...our growing client-base was not getting the training they needed to make the most out of their investment. With our local courses, we ensure quality. This is a consistent theme at Netelligent because we are adamant about your success.

Great Partnerships

We have formed partnerships with two of the most prominent and trusted training organizations: Global Knowledge and Skyline Training. Together you have access to classes on virtually any platform, including: Cisco, EMC, VMware and Microsoft. The goal is to help you get the most out of your investment in your resources. So, whether you need to get ready to support a new technology, or need to keep your certifications up to date, we can help.

Custom Training for Implemented Solutions

How do you train a staff that works around the clock? Actually, how do you do it efficiently and consistently? Some situations call for Customized training. Our Training team can work with your organization to create custom classroom or computer-based training. This is ideal for any team that has multiple shifts.
